## Professional Summary

B.Tech Artificial Intelligence & Data Science graduate with 1 year of hands-on experience designing, building, and optimizing scalable ETL and data pipelines for enterprise applications. Proficient in **Python**, **PySpark**, **Hadoop**, **Hive**, **MySQL**, **AWS S3**, and **Power BI**, with strong experience in data cleaning, validation, transformation, schema design, and aggregation. Skilled in transforming raw and transactional data into structured, analysis-ready datasets. Seeking opportunities as a **Data Engineer**, **Big Data Engineer**, or **Data Analyst**.

## Technical Skills

**Programming & Query Languages:** Python, Sql

**Big Data & Data Engineering:** Apache Spark (PySpark), Hadoop (HDFS), Hive, Apache Airflow, ETL, Data Pipelines, Batch Processing, Data Cleaning

**Databases & Cloud:** MySQL, AWS S3

**Data Analytics & Visualization:** Power BI, Pandas, NumPy, Matplotlib, Data Analysis, Data Visualization, SQL Reporting

**Tools & Practices:** Git, GitHub, Postman, Thunder Client, VS Code, Linux (Ubuntu), Agile, Pipeline Debugging, API Testing

## Professional Experience

### Data Engineer Intern

ThinkInfo Expert Solutions Pvt. Ltd.

Sep 2025 – Present

Salem, Tamil Nadu

- Built and maintained **10+ enterprise data modules** for **20+ internal users** using Python, MySQL, and MongoDB, supporting data processing, workflow automation, and reliable data management.
- Designed and optimized **40+ SQL queries** and MongoDB **Aggregation Pipelines** for HR datasets, improving data retrieval and reporting efficiency through data extraction, cleaning, validation, and transformation.
- Developed and integrated **30+ RESTful APIs** with CRUD operations for employee, attendance, payroll, leave, and department data, ensuring data validation, consistency, and integrity.
- Tested and debugged **100+ API endpoints** using **Postman** and **Thunder Client**, while collaborating in an **Agile** environment using **Git**, **GitHub**, Linux, and Windows.

## Projects

### Projects

#### Spotify Data Analytics using Python & MySQL

2026

Python, Spotify Web API, MySQL, Pandas, Matplotlib, SQL

- Built an end-to-end **data pipeline** in Python to extract track name, artist, album, popularity, and duration from the **Spotify Web API**.
- Cleaned and transformed raw API responses using **Pandas** and loaded structured datasets into MySQL for efficient storage and SQL-based analysis.
- Analyzed track popularity trends using **SQL**, created visualizations with **Matplotlib**, and exported analysis results to **CSV** for reporting.

#### Human Resource Management System (HRMS) – Data Layer

2026

Python, MySQL, MongoDB, ETL, REST API

- Modeled **database schemas** across MySQL and MongoDB for core HR and finance data, enabling efficient SQL queries and aggregation pipelines.
- Built ETL pipelines in Python to convert transactional records into **structured datasets** with secure, validated flow.
- Integrated REST APIs using **Node.js/Express.js** to connect the data layer with application workflows.

## Education

### Muthayammal Engineering College

B.Tech, Artificial Intelligence and Data Science, CGPA: **8.17/10**

2022 – 2026

Tamil Nadu
